

## Customer Template Checklist

**These instructions are here to guide you on creating the templates for your custom cut SeaDek. Please read the below steps carefully, as these are in place to ensure that your SeaDek meets all your boating needs!**

1) Lay the clear mylar flat on the area where you would like your SeaDek. Using masking tape to tape the edges of the mylar will help keep the template in place while you are tracing your pattern. It is best to work from one piece of mylar at a time. If needed, you can trim the mylar to fit in a tight or curved area, but do not cut the mylar into the shapes of the parts.

2) Use a black marker to trace your desired pattern. If your boat has a molded in non-skid, use the non-skid edge to trace the parts. If your boat is smooth, trace the parts to the desired size.

3) If you choose to add one of our routing designs or full sheet laser options to your pads, note how the parts align by using a straight edge to draw a line from part to part. This will ensure proper orientation for all the parts.

4) For all pieces templated, regardless of adding a routed design or not, label the following on each part:

- o Bow, stern, port, and starboard
- o Cut outs, hinges, or latches
- o Number each part
- o Notate TOP on the top of each part
- o Name and contact information

5) Take photos of your traced pattern on the boat before detaching and email to [customerservice@seadek.com](mailto:customerservice@seadek.com).

6) Complete page 2 of the Material Information Sheet with your contact information, desired material specifications, and design choices. Use page 3 to provide a sketch of your pattern and the corresponding numbering of each part as well as a description of the part.

*If a logo is desired, please call in to a representative to verify that we are able to create it. If a text logo is desired, specify the font style you want as well as the location and size of the logo on the pad. If no text style is selected, we will use a block style generic font.*

Please note, if you do not complete each step on this sheet it may delay the process of your template once received by SeaDek. When we receive the template, [scans@seadek.com](mailto:scans@seadek.com) will

send you an email confirming receipt. Within 3 business days, you will receive a quote via email for your project. This may be delayed if you do not provide all information requested.

Take your time when creating the template. Your work will decide how accurate our work will be. Note; we are always within a 1/16" (0.15 cm) tolerance of the templates received, so please try to be as precise as possible.

*Once your templating process is completed, please reuse the shipping carton with the included return label to send back the templates and the completed Material Information Sheet.*
