

SeaDek[®]

CUSTOMER TEMPLATE CHECKLIST

These instructions are here to guide you on creating the templates for your custom cut SeaDek. Please read the below steps carefully, as these are in place to ensure that your SeaDek meets all your boating needs!

STEP ONE:

Lay the clear mylar flat on the area where you would like your SeaDek. Using masking tape to tape the edges of the mylar will help keep the template in place while you are tracing your pattern. It is best to work from one piece of mylar at a time. If needed, you can trim the mylar to fit in a tight or curved area, but do not cut the mylar into the shapes of the parts.

STEP TWO:

Use a black marker to trace your desired pattern. If your boat has a molded in non-skid, use the non-skid edge to trace the parts. If your boat is smooth, trace the parts to the desired size.

STEP THREE:

Note how the parts align by using a straight edge to draw a line from part to part. This will ensure proper orientation for all parts.

STEP FOUR:

For all pieces templated, label the following on each part:

- "Bow" for part orientation
- Cut outs, hinges, or latches
- Number each part
- Notate TOP on the top of each part

STEP FIVE:

Take photos of your traced pattern on the boat before detaching and email them to endusersales@seadek.com.

CUSTOMER TEMPLATE CHECKLIST

STEP SIX:

Complete the included Custom Order Form with your contact information, desired material specifications, and design choices. Use the boat diagram to provide a sketch of your pattern and the corresponding numbering of each part, as well as a description of the part.

If a logo is desired, please call in to a representative to verify that we are able to create it. If a text logo is desired, specify the font style you want, as well as the location and size of the logo on the pad. If no text style is selected, we will use a block style generic font.

Please note, if you do not complete each step on this sheet it may delay the process of your template once received by SeaDek. When we receive the template, scans@seadek.com will send you an email confirming receipt. Within 3 business days, you will receive a quote via email for your project. This may be delayed if you do not provide all information requested.
